PROJECT REPORT

Medix Management System

Course Title: Computer Programming II Lab

Course Code: CSE-1222

Semester: 2nd

Section :2AF

Department of Computer Science and Engineering
International Islamic University Chittagong (IIUC)

Submitted To: Mrs. Farzana Tasnim

Assistant Professor, Department of CSE, IIUC

Submitted By:

Team: MediTech trio

Al-Humaira Tabassum (C251225)

Makhnoon Kabir Mahira(C251227)

Sabrina Akter Suchona(C251231)

Submission Date: 22 January 2026

Table of Content:

Selection No.	Title	Page No.
1	Abstract	1

3	Welcome Page	3
4	Login Page	4
5	Home Page	5
6	Medicine Module	6
7	Production Module	7
8	Medicine List	8
9	Order	9
10	Employee	10
11	Logout Page	11
12	Conclusion	11

1) Abstract:

- The Medix Management System is a software application designed to manage medicine-related activities efficiently in a medicine factory.
- The system automates medicine management, production details, order processing, and employee information.
- It provides a centralized platform for storing and maintaining data in an organized manner.
- The system helps reduce manual work and minimizes errors.
- It ensures easy access to information and improves overall management efficiency.

2) Introduction:

Medix Management System is a Computer Science and Engineering (CSE) academic project developed to manage and organize the activities of a medicine manufacturing or pharmaceutical management system efficiently.

In many medicine factories, tasks such as medicine management, production tracking, order handling, and employee management are often performed manually, which can lead to errors, data loss, and inefficiency. This project aims to overcome those problems by providing a computerized solution.

The system is developed using the C++ programming language, following structured and modular programming concepts.

Medix Management System is a menu-driven application that allows users to interact with the system easily by selecting different options corresponding to different modules.

3)Welcome Page:

WELCOME TO

MEDIX MANAGEMENT SYSTEM a C++ Based Medicine Factory Management Project.

Medix Management System is a Computer Science and Engineering (CSE) academic project designed to manage and organize medicine factory operations in an efficient and systematic manner. This project aims to replace manual management systems with a computerized solution to reduce errors and improve productivity.

MAIN MODULES

- Medicine Module
- Production Module
- Medicine List Module
- Order Module
- Employee Module

4) Login Page:

The screenshot shows a login page divided into two main sections by a vertical line. The left section has a dark grey header with the text 'Login Type'. Below it is a dropdown menu currently showing 'Chairman', with a list of options: 'Chairman', 'Supervisor', 'Employee' (highlighted with a purple bar), and 'Customer'. To the right of the dropdown is a 'Next' button. The right section contains three input fields labeled 'Name', 'Email Address', and 'Password', each followed by a colon and an empty text box. At the bottom of this section are two buttons: 'Back' and 'Enter'.

- This page acts as the **security gateway** for the system.
- Users can **select their specific role** (e.g., "Chairman") from a **dropdown menu**.
- After selecting the role, the system prompts the user to enter:
 - **Name**
 - **Email**
 - **Password**
- The system **verifies the user's identity** before granting access to sensitive data.
- The interface ensures that **only authorized personnel** can access the management portal.
- By separating the process into **two steps (role selection + login credentials)**, the system can **load specific permissions** based on the user type.
- Functions as the **primary barrier** to protect internal pharmaceutical records.
- Ensures **secure, user-specific sessions** within the system.

5) Home Page:

- This page serves as the **central navigation hub** of the Medix Management System.
- It connects all major **functional departments** of the medicine factory.
- The main menu displays **five clearly labeled buttons** for easy navigation:
 - Medicine Module
 - Production
 - Medicine List
 - Order
 - Employee
- This page allows managers to **access different modules with a single click**.
- It helps users switch easily between **inventory management, production activities, and employee management**.
- The main menu acts as the **Home screen** of the system.
- It provides a **structured and organized overview** of the entire factory management workflow.
- The design ensures **simplicity, usability, and efficient system control** for authorized users.

6) Medicine Module:

The screenshot shows a web form for entering medicine information. It has a light gray background. The form contains the following fields and labels:

- Enter Medicine ID :
- Medicine Name :
- Price :
- Manufacturing Date :
- Expiry Date :
- Stock Update :
- Quantity : ^ v

At the bottom of the form, there are two black buttons with white text: "Save" on the left and "Back" on the right.

- This page serves as the **core inventory entry module** of the Medix Management System.
- It is used to **register new pharmaceutical products** into the factory's database.
- The page includes input fields for:
 - **Medicine ID**
 - **Medicine Name**
 - **Price**
 - **Manufacturing Date**
 - **Expiry Date**
- It allows users to **update stock quantities** to reflect the current warehouse availability.
- This module helps in maintaining **accurate and organized medicine records**.
- It plays a crucial role in **tracking the lifecycle of each medicine batch** produced within the facility.
- Ensures better **inventory control, safety compliance, and data reliability**.

7) Production Module:

The screenshot displays a web form for the Production Module. It consists of three main sections, each with a title and a label:

- Monthly Medicine**: Contains a label 'Amount' followed by a numeric input field with the value '0' and up/down arrow icons.
- Production Status**: Contains a label 'Status' followed by a dropdown menu currently showing 'Completed'.
- Defected Product**: Contains a label 'Amount' followed by a numeric input field with the value '0' and up/down arrow icons.

At the bottom of the form, there are two buttons: 'Save' and 'Back'.

- This module is designed to manage the **monthly manufacturing output** of the factory.
- It focuses on **production monitoring and quality control metrics**.
- Users can record the **total monthly medicine production quantity**.
- The page allows updating the **Production Status** to track manufacturing progress.
- It includes a dedicated section for **Defected Products** to monitor production waste.
- Helps ensure **high-quality standards** by identifying defective items.
- Provides essential data for analyzing **factory efficiency and performance**.
- Assists management in evaluating **monthly production targets and outcomes**.

8) Medicine List:

A screenshot of a web application interface titled "Medicine List". The interface is a light gray box with a white border. Inside, there are two dropdown menus. The first is labeled "Medicine Category :" and has "Tablet" selected. The second is labeled "Medicine Name :" and has "Paracetamol" selected. Below the dropdowns, there are two black buttons with white text: "Save" on the left and "Back" on the right.

Medicine List

Medicine Category : Tablet

Medicine Name : Paracetamol

Save Back

- This page functions as a **quick lookup and organization tool** for the factory's medicine inventory.
- It allows users to select a **Medicine Category** (such as Tablets, Syrups, etc.).
- Based on the selected category, the system **filters and displays relevant medicines** instantly.
- Helps users **find specific medicines quickly** without searching the entire database.
- Simplifies the process of **checking product availability**.
- Allows users to **review detailed information** of individual medicines.
- Acts as the primary tool for **organized data retrieval and inventory auditing**.
- Enhances efficiency in **inventory monitoring and management**.

9) Order:

Order

Category : Tablet

Medicine Name : Paracetamol

Quantity : 0

Price :

Date & Time : 1/1/2000 12:00 AM

Save Back

- It is used to **record all outgoing medicine orders and shipments.**
- The page captures key order details such as:
- This page manages the **commercial and sales operations** of the factory.
- **Medicine Category**
- **Quantity**
- **Price**
- **Date & Time** of the order
- Helps ensure that the factory's **supply aligns with market demand.**
- Maintains a **clear and organized record of all transactions.**
- Plays a vital role in **logistics and order tracking.**
- Assists in maintaining **accurate financial and sales records.**
- Supports effective **business and inventory planning.**

10) Employee:

The screenshot shows a web form for adding or editing an employee. It has a light gray background. The form contains four rows of input fields, each with a label and a colon separator. The first row is 'Employee ID' with a text input field. The second row is 'Employee Name' with a text input field. The third row is 'Shift' with a dropdown menu showing 'Day'. The fourth row is 'Salary' with a dropdown menu showing '5,000 BDT Only'. At the bottom of the form, there are two black buttons with white text: 'Save' on the left and 'Back' on the right.

Employee ID	:	
Employee Name	:	
Shift	:	Day
Salary	:	5,000 BDT Only

- This page is dedicated to **Human Resource (HR) management** within the Medix Management System.
- It is used to manage the **factory's workforce and payroll information**.
- The page records essential employee details such as:
 - **Employee ID**
 - **Employee Name**
 - **Work Shift** (Day / Night)
 - **Monthly Salary (BDT)**
- Helps management **track labor costs** accurately.
- Ensures that **production lines are properly staffed** at all times.
- Acts as the **central database for all employee-related information**.
- Supports efficient **personnel management and administrative control**.

11) Logout Page:

- This page is displayed when the user chooses to **exit the system**.
- It asks the user for **confirmation before logging out**.
- The page shows the message:
 “Are you sure you want to logout?”
- It provides two action buttons:
 - **Yes, Logout** – Logs the user out of the system and redirects to the **first (welcome/login) page**.
 - **Cancel** – Cancels the logout process and returns the user to the **previous page**.
- This page helps prevent **accidental system exit**.
- Ensures a **safe and controlled logout process** for users.

12) Conclusion:

The Medix Management System is an efficient data management solution tailored specifically for the pharmaceutical manufacturing industry. It integrates essential factory operations—such as secure user login, inventory tracking, production monitoring, and employee payroll—into a single, organized platform. By digitizing the workflow from the production line to final sales, the system ensures higher accuracy, better quality control, and streamlined administration. This project provides a robust framework for managing high-volume medicine data, ultimately improving productivity and ensuring safety compliance within a factory environment.
